EXPERIENCE

Full-Stack Web Developer — *Freelance*

(02/2024 - Present)

- Collaborating with client 3-5 times each month to review visual mockups and ensure desired appearance, user experience, and overall site functionality
- Developing a flexible application and maintaining high performance by studying and adhering to best practices, managing desired business logic, and efficiently loading heavy assets such as images
- Creating an intuitive item filtration system with sort, search-by-name, and filter-by-tag options to simplify the user's experience of finding what they are looking for

React.js – TailwindCSS – Node.js – Express.js – SQLite

Frontend Web Developer — *Guardian Group Org.*

(09/2020 - 06/2021)

- Played an integral role in a tight and collaborative 3-person team, performing frequent code reviews and writing tests to ensure proper app functionality
- Collaborated with UX Designers to create the primary form system for Guardian Group's Project 1591, enabling an easy-to-use input system for important user information
- Designed the internal API to facilitate seamless communication between Project 1591's web application and AWS database services

React.js – TailwindCSS – GraphQL – AWS s3/DynamoDB/Cognito
